Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1-2 and 4-9, drawn to expression cassette of SEQ ID NO: 1, modified staphylokinase gene of SEQ ID NO: 2, plasmids and recombinants of E. coli containing said plasmids, classified in class 435, subclass 252.33.
- II. Claim 10-22, drawn to a method for over-producing staphylokinase comprising obtaining a modified DNA encoding staphylokinase, its expression vectors and host system, classified in class 435, subclass 220.
- III. Claim 3 and 23-25, drawn to staphylokinase of SEQ ID NO: 3 and a methods of its use for dissolving blood clots classified in class 424, subclass 94.64.

Inventions I-II are distinct for the following reasons.

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions, products of group I are not used in the method of group II, which requires obtaining a modified staphylokinase gene and using it. The inventions of Group I and Group II are not disclosed as capable of use together.

Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the

they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions, products of group I are not the product of group III and therefore cannot be used in the method of group III.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions, the methods of Group II and III have different designs, modes of operation, and effects, and are not disclosed as capable of use together.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior

art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
